

EDEN Select Application Software

Eden cooler selection application is a software based on global leading refrigeration system designer experience, catering for professional refrigeration system designer requirement to meet refrigeration system customization.

This application will be based on the environmental information, product specification and multiple aspects assisting designer in optimizing the required cooling capacity based on the environment temperature. It is convenient, fast and accurately identify the net refrigeration capacity and product model requirement. This will assist better design solution and increase designer's efficiency in meeting the overall project target or standards.

Features:

- Individual heat load calculation such as cold room load, product load, infiltration load, etc.
- Various food heat load references
- Freezing time calculation
- Total operation load calculation
- Unit cooler/Evaporator selection
- Compressor/Condenser selection
- Printable and transmittable PDF summary page (can be sent via email)

The latest update includes **new** features such as:

- o Updated data of “Heater Watt” for all existing unit cooler models in database
- o New product series (ESL/ESN series unit cooler) (URM/UPL series unit cooler)
- o New product series (Jumbo Single Row Condenser)
- o Merged Chinese version into English version
- o Catalogue available for new product series (English Ver.)

Ways to download:

Through Apple store, using a mobile phone/tablet computer. Search for “Eden Select” in the query box or you can scan the QR Code as shown below to download this app to your mobile device.
